3. (a) is valid

(b) is invalid  
-linked list's iterators only have forward capabilities  
and cannot be subtracted

(c) is valid

5.

opstock

output  
EXP  
EXP  
DIV

6. it wouldn't work. old node is deleted before  
 $P \rightarrow next$  is assigned to  $P \rightarrow next \rightarrow next$   
 So  $P \rightarrow next$  would not exist at this time  
 causing a segmentation fault
